BHARAT DHAMA

Palantir Foundry Developer | AI Application Engineer | Python | TypeScript | Ontology | AIP | LLM Integration | Operational Applications

Professional Summary

Palantir Foundry Developer with 3.5+ years of experience designing AI-powered enterprise applications, analytics platforms, and operational workflows for global Life Sciences organizations. Specialized in building scalable solutions using Palantir Foundry including Ontology, Workshop, Pipeline Builder, Operational Applications, AIP, Automations, and Ontology SDK. Delivered 10+ production applications supporting thousands of users across 40+ countries while driving digital transformation through AI, LLM integration, and enterprise analytics. Experienced in translating complex business requirements into secure, scalable, production-ready solutions through close collaboration with architects, SMEs, and business stakeholders.

Professional Experience

Cognizant
Associate (April 2023 – Present)
Intern (September 2022 – February 2023)

- Designed, developed, and deployed 10+ enterprise analytics and operational applications using Palantir Foundry for global Life Sciences clients supporting business users across 40+ countries.
- Built an AI-powered Coaching Application using Palantir AIP that evaluates manager–representative conversations using LLMs, business-defined coaching frameworks, and prompt engineering to generate structured performance scores and personalized improvement recommendations.
- Developed 5+ AIP Logic workflows integrating OpenAI models, prompt engineering, structured outputs, and ontology actions to automate conversational analysis and decision support.
- Engineered 5+ Pipeline Builder workflows to process, transform, and prepare enterprise datasets while improving performance through optimized transformations.
- Designed and maintained 20+ ontology objects, relationships, object types, and business models powering operational applications and enterprise analytics.
- Developed 10+ custom ontology functions and TypeScript-based actions to extend business workflows and application functionality.
- Built and automated 5+ production workflows using Foundry Automations, reducing manual effort and enabling reliable end-to-end AI processing.
- Developed a React and TypeScript analytics application using the Ontology SDK with role-based access, delivering interactive KPI dashboards for sales performance, territory coverage, product mix, customer purchasing behavior, sales trends, and attainment metrics.
- Participated throughout the complete software development lifecycle including requirement gathering, feasibility analysis, data modeling, ontology design, AI workflow development, testing, deployment, production support, and performance optimization.
- Collaborated directly with architects, SMEs, and business stakeholders to convert business requirements into scalable enterprise applications.
- Troubleshot complex production issues, optimized application performance, and improved overall platform reliability.
- Mentored junior developers and peers, conducted knowledge transfer sessions, led sprint planning meetings, presented client demonstrations, and coordinated development activities using Agile Scrum methodologies.

Key Projects

AI Coaching Application

Technologies: Palantir AIP, Ontology, Pipeline Builder, Automations, OpenAI Models, Workshop
Developed an AI-enabled coaching platform that analyzes conversations between sales representatives and managers. Implemented prompt engineering and LLM integration to evaluate conversations against business coaching frameworks, generate structured performance scores, recommend next-best actions, and automatically

persist results into ontology objects for downstream analytics.

Executive Sales Analytics Platform

Technologies: Workshop, Ontology, Contour, Slate
Designed interactive executive dashboards enabling leadership to monitor product sales, customer purchasing trends, KPI attainment, territory performance, and commercial effectiveness across global business operations.

React Operational Analytics Portal

Technologies: React, TypeScript, Ontology SDK
Developed a role-based analytics portal providing hierarchical access to business KPIs including sales trends, customer behavior, territory coverage, targets, product mix, and attainment metrics.

Customer Churn Analytics

Built analytics dashboards visualizing churn prediction outputs, customer behavior patterns, and business KPIs enabling proactive customer retention strategies.

Technical Skills

Palantir Foundry: Workshop, Ontology, Operational Applications, Ontology SDK, Pipeline Builder, AIP, Agent Studio, AI Assist, Functions, Automations, Developer Console, Slate, Quiver, Contour, Data Lineage, Object Explorer, Scheduler, Restricted Views
Artificial Intelligence: Prompt Engineering, OpenAI Models, LLM Integration, Structured Outputs, AI Workflow Automation, Conversational Analytics, AI Scoring Frameworks
Programming: Python, PySpark, SQL, Spark SQL, TypeScript, JavaScript, React
Data Engineering: Data Modeling, ETL, Data Transformation, Performance Optimization, Data Visualization
Tools: Jira, Confluence, Agile Scrum

Education

B.Tech — Electrical & Electronics Engineering
KIET Group of Institutions
CGPA: 8.0/10 | Graduated: 2022
